US Congressional	52	33,000	6.4%	3.2%	9.6%	
US Congressional	53	27,000	4.8%	3.5%	6.0%	lower

Notes:

¹Diabetes is defined as the percent of adults who ever reported being diagnosed with non-gestational diabetes.

† Estimate should be interpreted with caution because it is either unstable (coefficient of variation $\geq 40\%$) or it has a wide confidence interval (> 20 percentage points).

Lower and Upper CI denotes 95% confidence intervals for every calculated estimates. This means that the actual value lies between the lower and upper range.

Compared to State denotes estimates of districts that are significantly higher or lower than the overall California estimate.

Blank cells denote no significant difference.

Source: 2009 California Health Interview Survey (CHIS). Boundaries for legislative districts were approximated using 2010 Census tracts.
