Notes:

¹ Obese is defined as the percent of adults (18 years and over) whose body mass index (weight [kg] / height [m²]) is greater than or equal to 30.0.

† Estimate should be interpreted with caution because it is either unstable (coefficient of variation ≥ 40%) or it has a wide confidence interval (> 20 percentage points).

Lower and Upper CI denotes 95% confidence intervals for every calculated estimates. This means that the actual value lies between the lower and upper range.

Compared to State denotes estimates of districts that are significantly higher or lower than the overall California estimate.
