US Congressional	51	70,000	14.4%	9.9%	18.8%	
US Congressional	52	47,000	9.0%	5.2%	12.8%	lower
US Congressional	53	83,000	14.8%	10.1%	19.6%	

Notes:

<sup>1</sup> Current smokers are defined as those who have smoked at least 100 cigarettes in their entire lifetime and currently smoke every day or some days.

† Estimate should be interpreted with caution because it is either unstable (coefficient of variation  $\geq 40\%$ ) or it has a wide confidence interval ( $> 20$  percentage points).

**Lower and Upper CI** denotes 95% confidence intervals for every calculated estimates. This means that the actual value lies between the lower and upper range.

**Compared to State** denotes estimates of districts that are significantly higher or lower than the overall California estimate. Blank cells denote no significant difference.

Source: 2009 California Health Interview Survey (CHIS). Boundaries for legislative districts were approximated using 2010 Census tracts.
