US Congressional	5200%	208,000	30.0%	25.4%	34.7%	lower
US Congressional	53	304,000	42.3%	36.9%	47.8%	

Notes:

¹Sugar sweetened beverage consumption is defined as the percent of the population ages 2 and over drinking one or more glasses or cans of a sugar sweetened beverage. For all eligible ages this includes non-diet soda, sweetened sports drinks or sweetened fruit drinks. For ages 12 and over this includes energy drinks. For ages 18 and over this includes sugar sweetened teas or coffee.

† Estimate should be interpreted with caution because it is either unstable (coefficient of variation $\geq 40\%$) or it has a wide confidence interval (> 20 percentage points).

Lower and Upper CI denotes 95% confidence intervals for every calculated estimates. This means that the actual value lies between the lower and upper range.

Compared to State denotes estimates of districts that are significantly higher or lower than the overall California estimate. Blank cells denote no significant difference.

Source: 2009 California Health Interview Survey (CHIS). Boundaries for legislative districts were approximated using 2010 Census tracts.
