Ever Diagnosed with Diabetes¹ by CA Senate District, age 18+, CHIS 2011-2012

Prepared by the UCLA Center for Health Policy Research, September 2013

Notes:

¹Diabetes is defined as the percent of adults who ever reported being diagnosed with non-gestational diabetes.

Lower and Upper CI denotes 95% confidence intervals for every calculated estimates. This means that the actual value lies between the lower and upper range.

Compared to State denotes estimates of districts that are significantly higher or lower than the overall California estimate. Blank cells denote no significant difference.

Source: 2011-2012 California Health Interview Survey (CHIS). Boundaries for legislative districts were approximated using 2010 Census tracts.
