Link between uninsurance and substandard housing

Despite large decreases after ACA enactment, the rate of uninsurance among people who lack basic housing necessities is still high. The rate is even higher among lower-income families.

Uninsured rate for American ages 0-64, all income levels

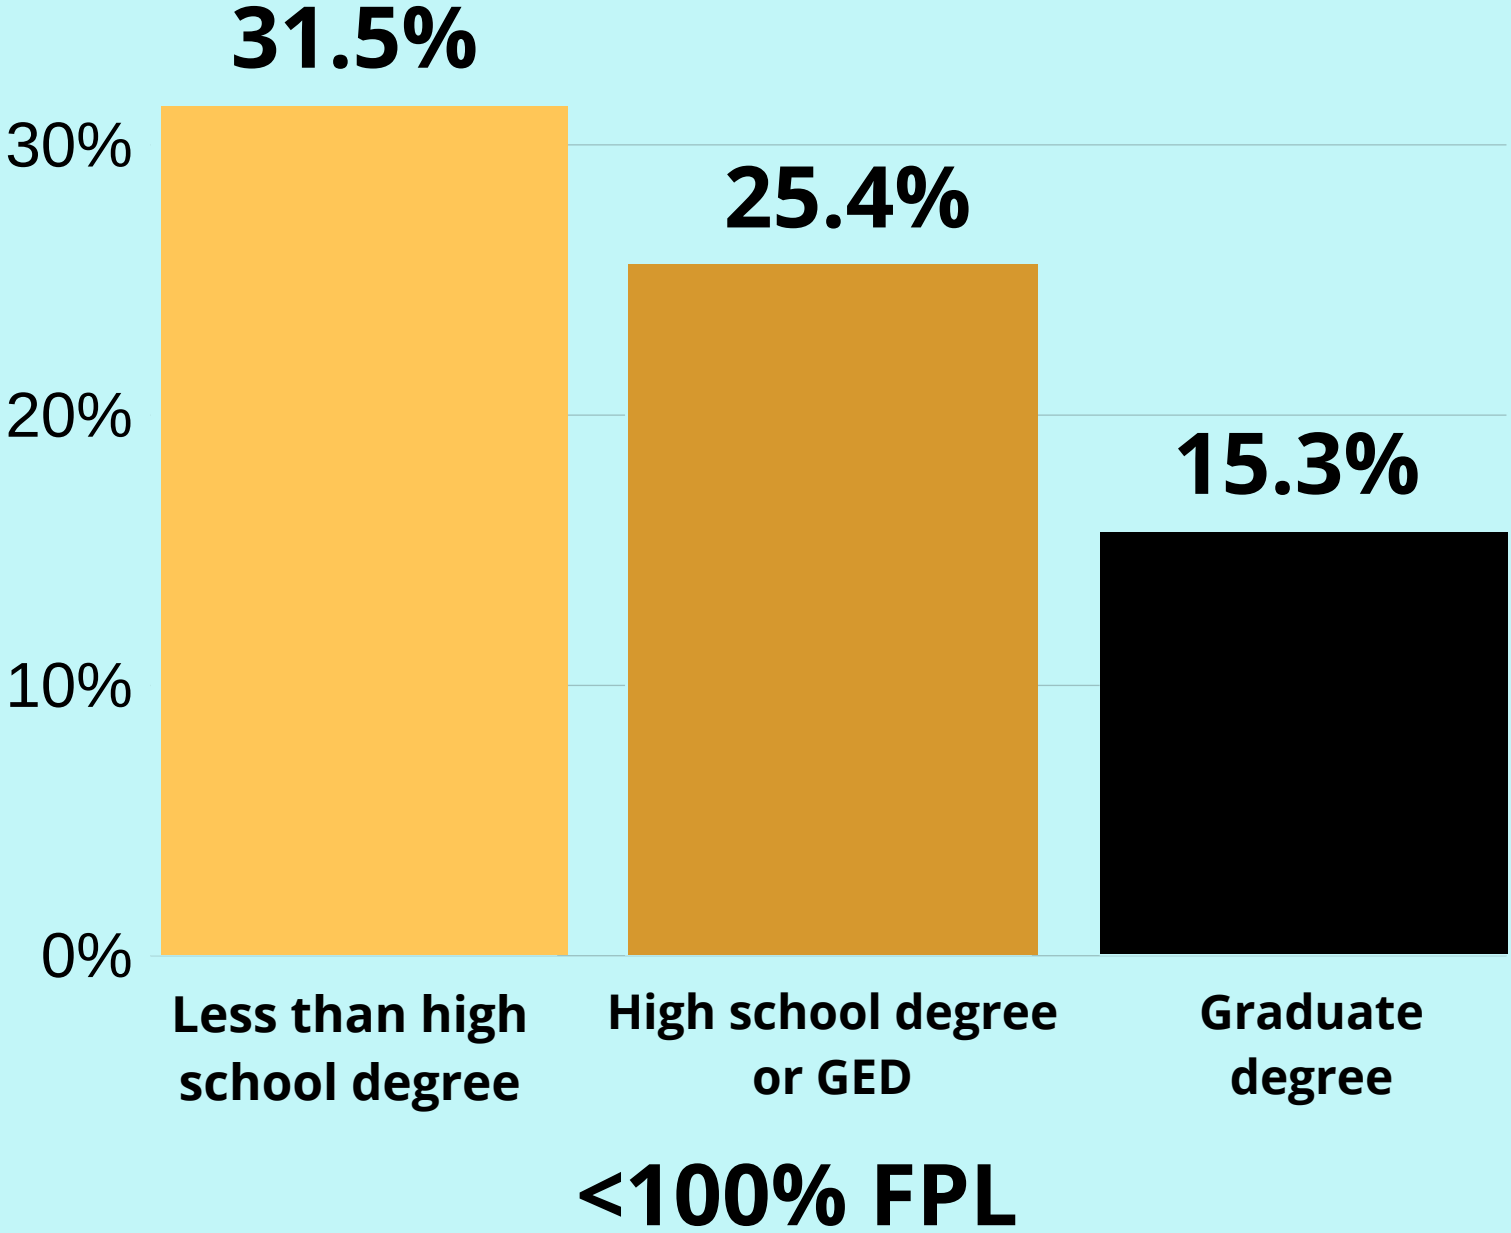

Definition of basic housing necessities:

Having a bathtub or shower, a sink with a faucet, a stove or range, and a refrigerator.

Uninsured rate for ages 18 to 64 in US, by education & income as % FPL*, 2018

Among the lowest income group, those who lack a high school degree have an uninsurance rate **2x higher** than those with graduate degrees.

Among the highest income group, those who lack a high school degree have an uninsurance rate **nearly 10x higher** than those with graduate degrees.

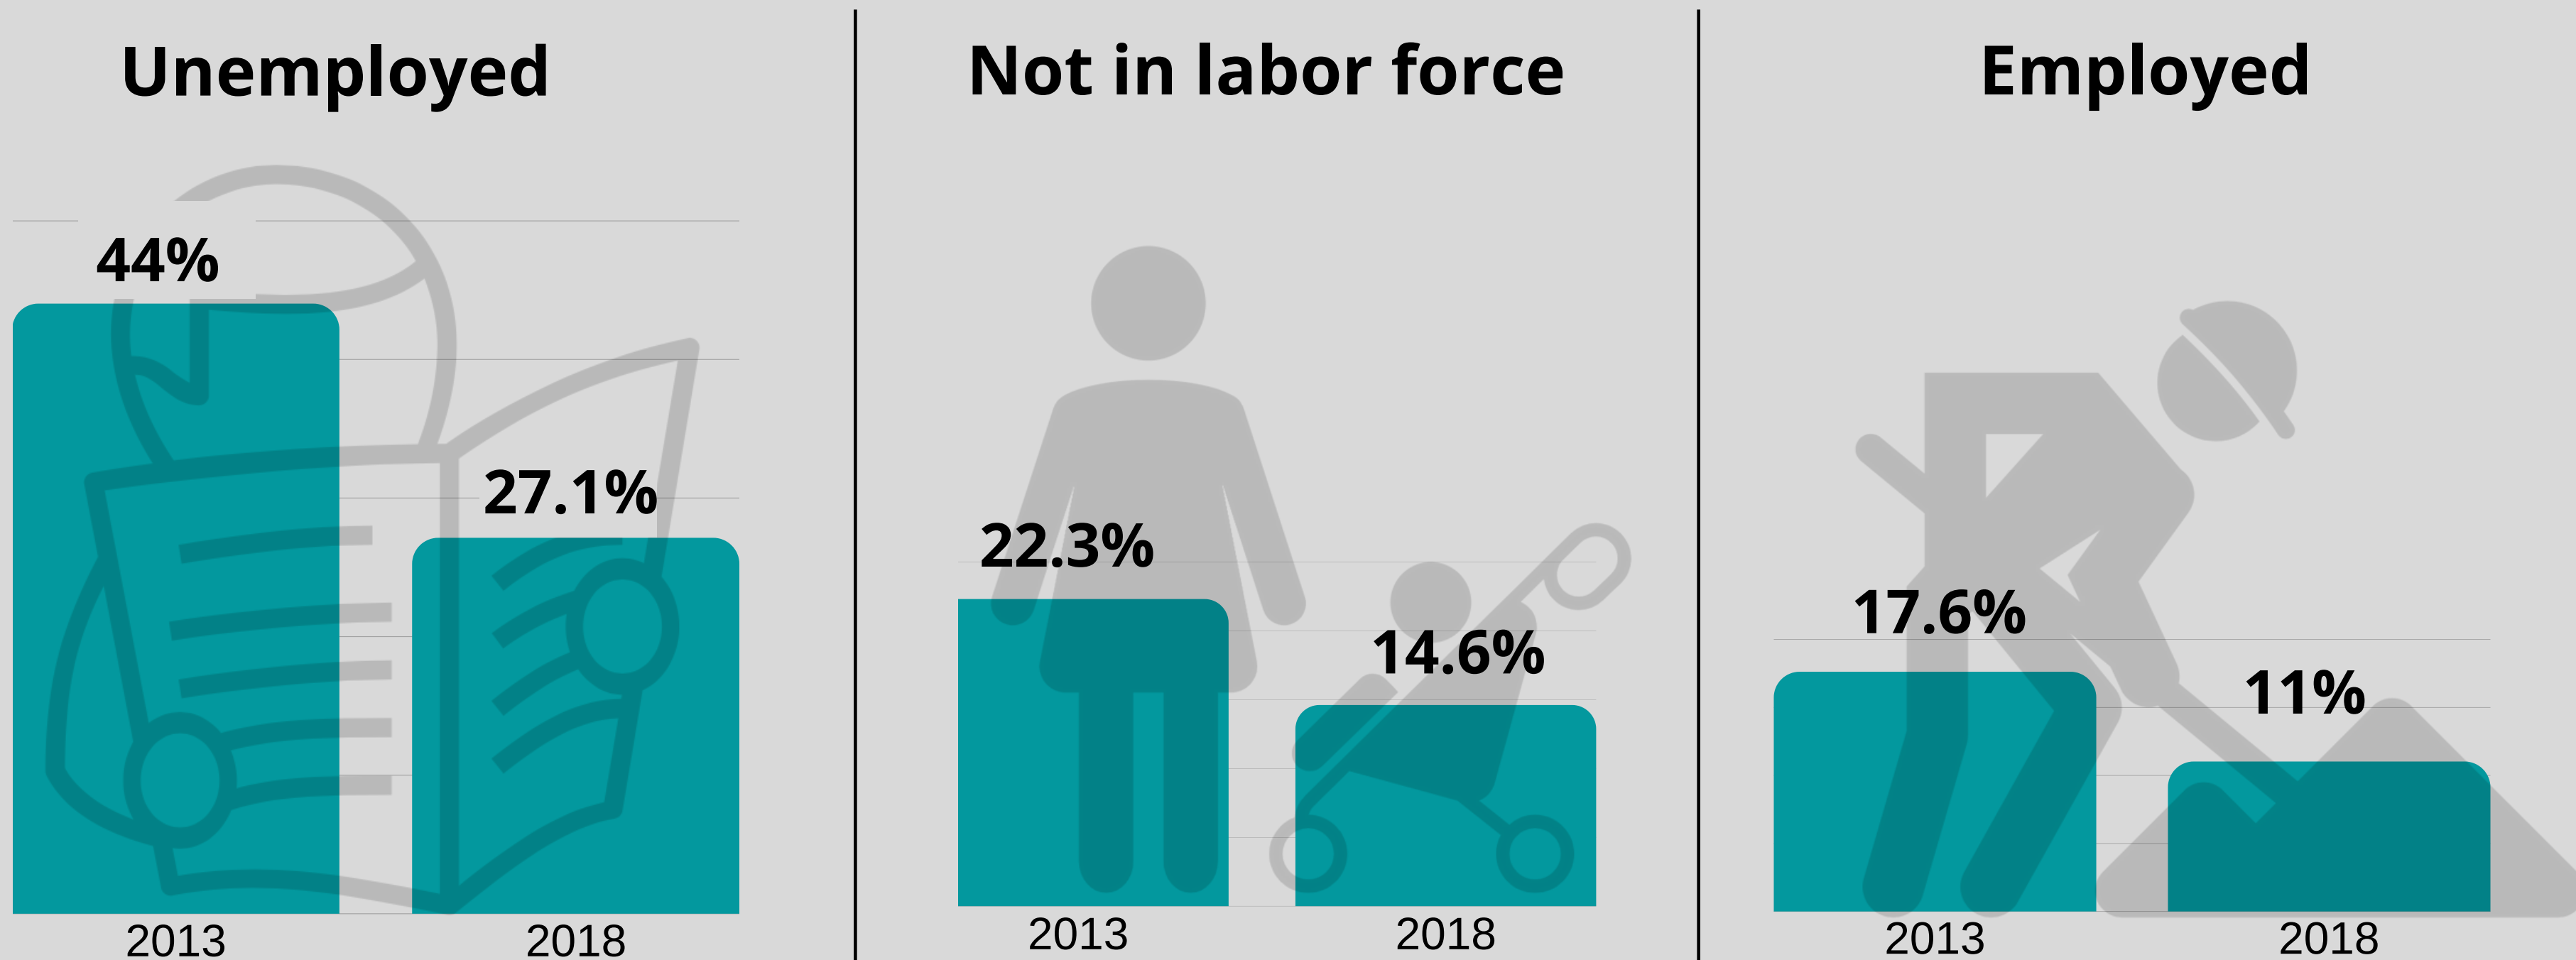

*Federal Poverty Level

Workers and nonworkers gained insurance after the ACA

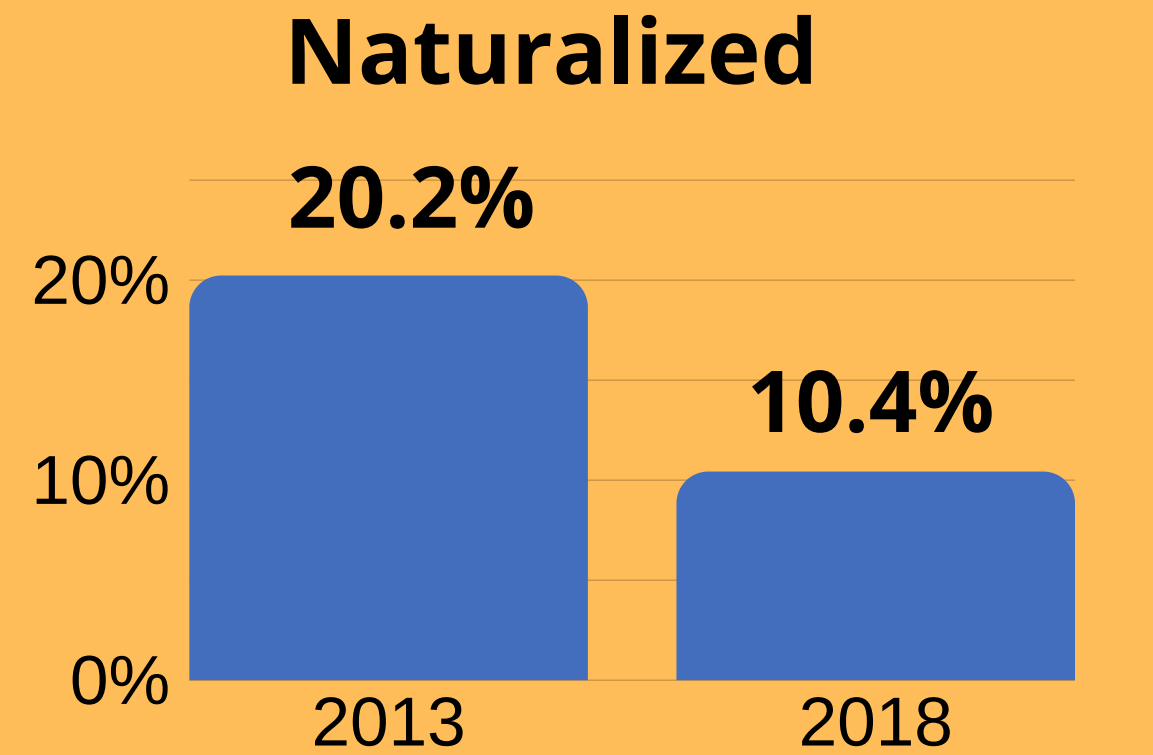

Rates of uninsurance dropped more than a third for unemployed, but disparity remained.

Shown is the uninsurance rate by employment status, ages 18-64.

1 in 3 non-citizens remain uninsured, despite improvements

Shown is the uninsurance rate by citizenship status, ages 0-64.

5x higher level of uninsurance among people with no English proficiency

Shown is the uninsurance rate among ages 0-64, by ability to speak English:

AI/AN and Hispanic/Latino groups retain highest uninsured rates

Shown is the uninsurance rate among those ages 0-64, by selected race and ethnicity.

19- to 25-year olds had the largest gains in coverage post-ACA

Shown is the uninsurance rate by age group (0-5 and 65 and older not shown).

Medicaid enrollment prompted higher coverage rates

The Medicaid program especially benefited low- and middle-income individuals. Shown is health coverage, by type of insurance for ages 0-64.
