Increased Household Conflict During COVID-19 Stay-at-Home Orders

In March 2020, the lives of 40 million people in California were disrupted as many businesses and schools shuttered due to the COVID-19 pandemic stayat-home orders. This infographic examines increases in interpersonal conflict, snapping/yelling, or physical punishment by various sociodemographic factors.

Who experienced any increase in interpersonal conflict, snapping/yelling, or physical punishment in the household during stay-at-home orders?
