Severe Distress [‡]	9.6%	6.7%	6.6%	8.9%	8.7%	6.5%
In U.S. 0%–49% of lifetime	5.1%	19.4%	1.6%	50.4%	86.2%	78.2%
In U.S. 50%–99% of lifetime	21.3%	9.1%	4.2%	48.1%	13.8%	21.8%
In U.S. 100% of lifetime	73.6%	41.5%	94.2%	1.5% [†]	N/A	N/A

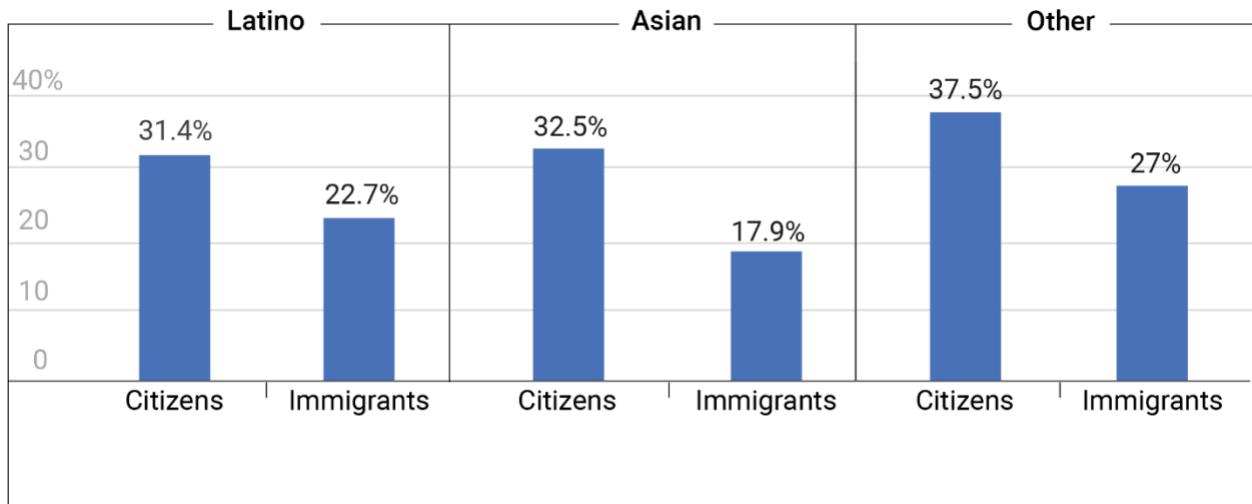

[†] Measurement is considered unstable

[‡] Moderate and Severe Distress were measured using the Kessler-6 (K6), which is designed to estimate the prevalence of diagnosable mental disorders within a population. Respondents with a score above 13 were considered to have severe psychological distress. Respondents with a score between 9 and 12 were considered to have moderate psychological distress.

Note: Naturalized citizens are included in the citizen group.
